

Climate Protection Certificate 2023

For the Girsberger Group

Voluntary contribution to climate protection

Girsberger uses energy-efficient production methods and handles resources carefully. Nevertheless, it is not possible to avoid CO₂ emissions completely in the production and distribution processes. To protect the climate and the environment, Girsberger therefore works together with Fair Recycling.

For 2023, the Girsberger Group offset 870 tonnes of CO₂ equivalents to offset the direct Scope 1 and Scope 2 emissions of the companies:

- Girsberger Holding AG, Bützberg/Switzerland
- Girsberger AG, Bützberg/Switzerland
- Mobimex AG, Seon/Switzerland
- Girsberger GmbH, Endingen/Germany
- Boreal doo, Kraljevci/Serbia

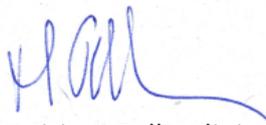

The project supported by Girsberger is verified in accordance with the SWISS CHARTER. With this certificate, Fair Recycling confirms that the emission reductions have been realised and the corresponding climate protection certificates, the so-called SWISS CHARTER Units (SCU), have been retired.
