

# Climate Protection Certificate

for the Girsberger Company

## Carbon Neutral

Girsberger produces energy-efficiently and handles raw materials carefully. Nevertheless, carbon emissions are generated in the production process and in sales and distribution which cannot be completely avoided. In order to protect the climate and the environment, Girsberger therefore works together with Fair Recycling.

In 2021, Girsberger compensated 671 tons of CO<sub>2</sub> equivalents for Girsberger Holding AG, Girsberger AG and Girsberger GmbH at their locations in Bützberg/Switzerland and Eendingen/Germany.

The project supported by Girsberger is verified according to the Swiss Charter. With this certificate, Fair Recycling confirms that emissions have actually been reduced and the corresponding climate protection certificates have been retired.
